PREPARING CORN SOIL A Homemade Appliance Which Does

the Work Thoroughly. The homemade appliance illustrated ers who will most directly benefit by its herewith is inexpensive and does its realization, and by the general public work more thoroughly and in a manner different from any similar device sive ramifications of an industry which known for the preparing of land for will keep an immense amount of money corn culture. It consists of six pieces at home which has hitherto been sent brings the diagonally opposite corners

HOMEMADE LAND RUBBER. resent corrugated surfaces. Three bolts are used to fasten the pieces together, which are made of five-eighths inch round iron. One bolt is placed in the center and the others one foot from either end. The outside bolts have an eye instead of plain head, by means of which a forked chain is attached for drawing the implement. The front cutting edges of the implement are protected and their efficiency aided by hav-ing them bound with flat iron two inches wide and one-quarter of an inch thick. This size rubber is found to be heavy enough and well adapted for ordinary work when constructed of oak wood, but if made of pine or any light wood it will require weighting.-Director R. M. Miller, in Bulletin 46, Md.

GROWING SUGAR BEETS.

It Is Now Being Tried in Nearly All Sections of the Country. One of the most promising signs of riculture is the awakening interest of the farmers of the country in improved methods of production, in diversified farming and in seeking out new fields for endeavor. In no other direction, perhaps, is there such marked evidence either cotton or corn.—Journal of Agriof the last-named tendency as in the growing sentiment favorable to the cultivation of the sugar beet, which seems to be in every mind, and which is likely to be tried this season in nearly every section of the country where it

no danger that there will be too much of it for the next half-century. The figures are interesting. It is estimated

that by all the beet-sugar factories of year but 40,000 tons. The annual conacre of sugar beets will yield one ton of pure sugar, or, in other words, that life may be saved by its use.—N., Y. it will require more than 2,000,000 Tribune. acres of the vegetable to supply the home demand!—Farmers Voice.

PIGS ALONG SHORE.

They Are Fed on Fresh Fish to Considerable Extent.

Pigs like fish, and pigs raised along shore owned by fishermen get plenty of fish to eat. Sometimes fish is fed to the fish to clear them of scurvy. Horseshoe crabs are often fed to pigs, the crabs being cut clear of the shells so that the pigs can get at them easily; the pigs like horseshoes. Often around salt water creeks min-

nows are caught and dumped into pig pens by the bushel. Many fish have hard, sharp, projecting spines that might stick in the pig's throat. When fish of this sort are fed the spines are first cut off, and only the bodies and tails fed. One of the names of the American sole is hog choker. Other food is fed along with fish, and

fish is never fed to the pigs before kill-ing time; it would make the pork taste tishy. Pigs will eat soft clams. Down Bay of Fundy way pigs go out at low in with great suddenness, it is necessary for the pigs to be on the alert, and they are. They hear the first sound of the coming tide wave and turn and scamper for the shore, and even then they get there none too soon, occasionally .- N. Y. Sun.

AGRICULTURAL HINTS.

It might be well for you to change the variety of your corn. Think of it. Broadcast sowing of ashes on plowed ground, before planting, is a good way of application.

Peas make an excellent green manure, but we would advise growing peas for the food they furnish.

In the new west, plant fruit trees and shade trees, even if you fail to grow

them. It is worth the trial. An advertiser who will cheat a news-

customer on the goods sold him. Perhaps there is, under ordinary cir-

cumstances, nothing better for pasture than clover, red clover, timothy and blue grass.

If you have a good farm and a good son, let him do the farming while you rest. A man who has developed both a good farm and a good son deserves

Don't be afraid to buy a poor farm, if

you cannot buy a good one. Brains, manure and management will make a worn-out farm good .- Western Plow-

DIVERSIFIED FARMING.

Its General Introduction Is a Matter of National Importance.

The national importance of the question of growing our own sugar supply is fast being realized, both by the farm-

of 4 by 4-inch scantling, seven feet abroad. It is a feature-perhaps the long, bolted together; the bolts run principal one—in a large scheme for diagonally through the pieces, which such a widening of our agricultural operations as will embrace the production of many articles now imported and which can be profitable and successfully raised at home. To-day we are importing large quantities of tobacco which might as well be grown here, where our varied climatic conditions are favorable for the many varieties of the fragrant weed. There are also several vegetable fibers adapted for home eral vegetable fibers adapted for home growth, but for which large sums are Paris Green and annually sent to other countries-such as hemp, flax, jute, etc. That the home growth of tobacco is capable of large extension is evinced by the fact that, for the year ending June last, over \$18,500,000 was paid for foreign grown and manufactured tobacco. To import cotton, seems very like the proverbial "sending coals to Newcastle," but \$7,-000,000 worth were received during the same period; while of vegetable fibres, such as hemp, flax, jute, manila hemp, etc., close on \$40,000,000 worth were imported, including both raw and manufactured material. Here are over \$65,-000,000 paid out for purely agricultural products which, with our almost unlimited natural resources, can be raised by our farmers. There may be some deductions on account of brands of foreign-grown tobacco necessary for certain uses, and also for some descriptions of cotton; but the bulk of the large sum mentioned could certainly be retained at home, and will be when our farmers are more alive to their necessi-Corn and cotton are both importhe times from the standpoint of ag- tant factors in our agricultural ecnomics, but it is possible and advisable to have more than one or two crops to rely on; and the more diversified the farmer's operations, the less is he likely to suffer from an over-abundance of

NEAT SAFETY DEVICE.

No Farmer Should Dig a Well With-

> Some Causes of Failure. inapopulation of 1200 fami for not paying their taxes. about good farming that most of us have to learn is to avoid waste. We pay taxes on land that we do not farm; we only half cultivate our fields, and so waste both land and labor; we leave a large percentage of the crop in the exact time. field: we waste time and capital raising inferior animals; we waste money in buying what we should raise ourselves; we waste energy in trying to do more than any one man can do right; we waste opportunities to improve our condition by staying away from in-stitutes and neglecting to read papers; we waste-in a thousand and one ways, and then we are ready to say that "farming don't pay." And it is no wonder.—Rural World.

Bamboos in the South.

Experiments in Florida and Louisiana have shown that bamboo will grow in those states almost as well as in the hottest countries. Around Fort Myers there are bamboos that have attained to a height of 50 or 60 feet. They are of tide and root up mussels. There, where the tide rises 40 or 50 feet, and comes 70 feet in India. In Orange county there is one clump of bamboos, said to be only ten years old, in which the stalks have attained to the height of 65 feet, the stalks averaging 13 inches in circumference. There are eighty stalks in the clump. This particular clump is of a variety from Bengal, where the wood is used for building purposes and for light spars for vessels.

More harvesting machinery is de-stroyed by the hot sun of midsummer

than by actual cost. The wood work of machinery lasts much longer if it is given a coat of linseed oil once a year. Some idle day go over the running gears of the wagon and give the cultivators, harrows, hay rakes and other machines a coat of the same. Anyone can do this, as there is no danger of geting too much oil on the wood, and it paper on his advertising will cheat the will not hurt the metal parts in any
